

ABSTRACT

An apparatus or device for simulating weapons firing/hit indications for military training which uses pyrotechnic devices to simulate target hits and hostile fire. The device in accordance with an embodiment of the present invention, can be used with blank ammunition. The combination of the device and the blank ammunition can offer both audio and visual indication of a hit in battlefield conditions and also simulate hostile fire. The device can be used for the training of military personnel. The device can provide visible and audible feedback to trainees. It can simulate hostile fire in which case the trainee must recognize the hostile fire and must be able to return fire.
